A New Civilizational Architecture

FISCAL ARCHITECTURE

Freedom Instead of Punishment · Contribution Instead of Tax

The Kolosveuma Collective

Technical Document · June 2026 · kolosveuma.org

1. The Old Logic – Why It Needed Replacing

The old tax system punished exactly what civilization needs most: work, creation, production, trade, and employment.

Tax	What It Penalised	The Structural Paradox
Income tax	Work and productivity	The harder you work, the more you pay
VAT	Value creation and exchange	Every step of production is taxed again
Corporate tax	Business success	Profit — the signal that something works — is punished
Social contributions	Employment	Hiring a person triggers an immediate penalty
Property tax	Building and ownership	You buy once and pay forever

The result was predictable: enormous bureaucracy, grey economy, tax evasion, and offshore structures. All rational responses to an irrational system.

Kolosveuma does not reform this logic. It replaces it completely.

2. The New Principle – Contribution

All existing taxes are abolished permanently. Replaced by a single Transactional Contribution in Peace Tokens, applied automatically at the moment of every economic exchange.

Contribution is not a tax. It is a natural, transparent act of participating in the common good — proportional to activity, automatic, and mathematically fair.

No declarations. No inspections. No tax authority. No compliance industry. Everything runs on blockchain — visible to every citizen, auditable by anyone.

When the fiscal system requires no paperwork and no inspections, it also requires no army of accountants dedicated to minimising a number. The resources freed flow directly back into civilizational improvement.

3. Contribution Rates — Four Categories

Category	Rate	Logic
CI-Positive activities	1%	Clean energy, education, healthcare, regenerative projects — the system rewards what improves civilization
CI-Neutral activities	4%	Standard legitimate commerce and services — the normal rate for all economic activity
CI-Negative activities	10%	Pollution and resource destruction — with a clear path to transformation
Speculative operations	15%	Pure financial extraction without civilizational value

CI-positive businesses automatically drop to 1% once verified — no application, no committee. CI-negative businesses can recover up to 40% of the surplus contribution by investing in genuine transition. The system does not punish — it transforms.

AI categorises every transaction in real time. The decision is mathematical — not subjective, not political, not subject to lobbying. A company that genuinely improves automatically migrates to the lower rate.

4. The Citizen Transition — Gradual and Fair

Period	Citizen Rate	What Is Happening
Day K	5%	Old taxes abolished. Single Transactional Contribution activates.
Day K+1	4%	First visible CI improvements. Public services increasingly CI-financed.
Day K+2	3%	CI mechanism accelerating. Citizens paying less, receiving more.
Day K+3	2%	Dignity packages fully active.
Day K+4 onward	1% → approaching 0%	Public services financed through verified CI growth. Citizens contribute minimally while receiving the full Dignity package.

Every year citizens pay less. Every year the system delivers more. The two lines converge by mathematical design.

5. The Life Standard Anchor

Workers keep their full gross wage. Employers pay only the Transactional Contribution — 4% for standard activity, 1% for CI-positive work. The practical effect is immediate and substantial.

	Old System	Kolosveuma
Worker receives	€800 net from €1,200 gross — €400 lost to contributions	€1,200 net — full gross wage retained
Employer pays beyond salary	€300-400 in social contributions on top of wage	4% Transactional Contribution on invoiced amount only
Pension security	Funded through political tax decisions — fragile and contingent	Secured through CI growth — structural guarantee, CI-indexed
Effective fiscal burden	30-50% of economic activity	4% standard · 1% for CI-positive work

The Life Standard Anchor rises automatically with national CI growth — not by political decision, but by architecture.

6. Automatic Distribution

Mathematics decides. Not politics. Not negotiation. Not timing.

Every Transactional Contribution is distributed instantly by smart contract — automatically, transparently, without any human decision in the chain.

Recipient	Share	Purpose
National Budget	40%	Core state functions — education, justice, security, national CI programmes
Local (Municipal) Budget	20%	Municipality where the transaction occurs — direct, automatic, no redistribution
National Civilizational Dignity Fund (NCDF)	25%	Pensions and existing social protection for current recipients

Recipient	Share	Purpose
Peace Dividend Fund (PDF)	10%	Global CI project financing — scaled by military spending
Stability Reserve	5%	Emergency buffer and value depreciation cycles

Key distinction: Existing pensions and social protection → financed from the 25% NCDF stream. All new Civilizational Dignity packages — Home Guarantee, Life Income, Family Support, Trees of Life — financed 100% from the Peace Dividend Fund through creation of new Peace Tokens. Human life is not a budget line. It is a source of new civilizational value.

The Municipality Incentive

20% flows automatically to the municipality where the transaction occurs. No application. No political decision. The money goes directly to where the economic activity happened.

The better the local conditions, the more economic activity. More activity generates more contributions. More contributions finance further improvement. The loop is local, self-reinforcing, and permanent. Municipalities compete to offer better conditions, cleaner environments, stronger communities — and the system rewards them directly.

7. Peace as Financial Incentive

The PDF contribution scales directly with military spending as a percentage of GDP. Nations that reduce military expenditure keep more resources for their own civilizational development.

Military Spending (% of GDP)	PDF Contribution Rate	Signal
Below 1%	1%	Peaceful nations — maximum resources for CI development
1-2%	3%	Low military posture — constructive direction
2-3%	5%	Moderate — approaching global average
3-4%	7%	Elevated — structural incentive to reduce
Above 4%	10%	High military spending — maximum PDF contribution

Peace becomes structurally more profitable than militarization — not through moral argument, but through financial architecture.

— Conclusion — Seven Core Principles

#	Principle
1	All existing taxes abolished — single Transactional Contribution introduced
2	Citizens: 5% → approaching 0% as CI mechanism matures
3	CI-positive business: permanent 4% (1% when verified) — the only fiscal obligation they carry
4	CI-negative: 10% · Speculative: 15% — with a clear, incentivised path to transformation
5	Local budget: 20% automatically to the municipality of transaction — no redistribution layer
6	Life Standard Anchor rises automatically with CI growth — mathematical, not political
7	Distribution is automatic — mathematics executes, not politics

This is not fiscal reform. It is the replacement of a system based on fear with one based on contribution and aligned incentives. For the first time, paying your share becomes a natural act of building a better civilization.

Mathematica contra tributa.

Mathematics against taxation. Mathematics for freedom.
